## TurboXS High Performance Boost Controller

Model : txs hpbc

Manufacturer : TurboXS

Designed for those who want the ability to radically increase their boost levels 1 to 30 psi above stock, but don't want to pay hundreds of dollars to do it. The TurboXS High Performance Boost Controller (HPBC) is the right choice for simple, accurate and reliable high level boost control. "When it came time for a boost controller Doug's Dynopower's Doug Derby chose the TurboXS HPBC manual unit. It's ease of adjustment, ability to hold boost levels rock solid and its budget friendly price were prime attractions." - turbo & High-Tech Performance, Mar 2002 Accurate Boost Control The HPBC has two (2) boost control mechanisms built into it. One is a ball and spring mechanism for large and coarse boost pressure increases and the other is a bleed valve system for precise boost pressure setting. The ball and spring mechanism keeps pressure out of the wastegate until the preset boost level is reached, significantly reducing wastegate creep and providing quicker turbo spool up. Boost is adjusted with the simple turn of the screws using the included 2mm hex key. Kit Includes: High Performance Boost Controller 6mm vacuum / pressure hose Mounting Bracket 12mm hose clamps 2mm Hex Key Quick & Easy to Install Installs as easily as our Standard Boost Controller: Simply cut the wastegate pressure hose and insert the supply pressure hose onto the brass nipple of the boost controller. Insert the wastegate supply hose onto the blue colored nipple. Secure the hoses with hose clamps. The Boost Controller can be mounted with included mounting bracket.
