## TurboXS DTEC Starter Kit

Model : TXS DTEC Starter

Manufacturer : TurboXS

The TurboXS DTEC is a revolutionary new product that turns your Nintendo® Gameboy Advance into a programmable, upgradeable, automotive performance tool for tuning, data logging, and diagnostics. The DTEC plugs into your Gameboy Advance (GBA) and comes preloaded with software that lets you use your Gameboy as a Boost Gauge, Exhaust Gas Temperature Gauge, Air Temperature Gauge and Tachometer. Future plug-n-play sensors will allow everything from Knock Indication to Vehicle Acceleration (ie. G-Force). All sensors are sold separately. The display is highly configurable and lets you customize things like gauge scaling, unit of measure (eg. psi or bar), text color and gauge range (eg. 0-100 deg C or 0-200 deg F). Data can be displayed via the gauge output or on a rolling time base log that can record, store, and playback data for closer analysis. DTEC Starter Kit Includes: DTEC Serial Adapter RJ12 Cable Cigarette Lighter Power Lead Battery Clip Power Lead Velcro GAMEBOY NOT INCLUDED
