## Cobb Tuning SF Intake System WRX STI

Model : COB 712100

Manufacturer : Cobb Tuning

Cobb Tuning's Intake utilizes several unique features in an effort to maintain optimal flow for performance while minimizing turbulence that can cause engine management problems. From a custom conical cloth air-filter element, we use a CFD-designed velocity stack leading to an unique air flow straightener grid. This straightener grid is specifically designed to smooth the incoming air flow as it passes the Mass Air Flow sensor for precise readings. This eliminates the "dead spots" experienced by other aftermarket intakes due to turbulence. NO other aftermarket Subaru intake system utilizes these critical design elements. In order to provide a system that looks as good on the outside as the technical advancements happening on the inside, we utilize a aerospace bonding agent to chemically bond the billet CNC 6061-T6 aluminum intake construction together. This eliminates any unsightly welds or other fasteners that distract from a clean appearance. A powdercoated black support bracket is included for secure installation. The system is finished out with a custom designed COBB Blue cloth conical filter which has been pre-oiled. Our filter is serviceable (like a K&N) with an available cleaning/oiling kit and does not need to be replaced for the entire lifespan of your vehicle.

**Price : \$150.00**
