## Bell Racing Excelerator Ultra Series Helmet

Model : Bell BR211xx

Manufacturer : Bell Racing

Excelerator is our top-of-the-line ultra lightweight high-speed aerodynamic open cockpit helmet designed to significantly reduce helmet lift and buffeting at speeds over 200 miles per hour. The Excelerator's narrow design, front spoiler and adjustable wicker combine to create helmet stability at high speeds. The helmet's adjustable side and top wickers allow the driver to raise or lower the wicker height from 100 thousands to 250 thousands to compensate for varying speeds and levels of helmet buffeting and lift. Additional features include a unique ventilation system that increases air circulation by accelerating airflow from the chin bar vents by drawing it through vents in the top of the helmet. Special recesses have been designed into the sides of the shell on the Excelerator to accommodate Hans clips.
