Model : BP BPPON-SHI/01

Manufacturer : Billet Products

We apologize that we are no longer able to obtain these shifters. If you wish to order one please visit Billet Products website in order to contact them directly, www.billetproduct.com.au

For over 10 years Billet products have been intensively designing and testing shifters to achieve the highest possible combination of quality and performance. Drawing on over 18 years engineering experience and with knowledge gained from direct involvement in the V8 Supercar series, Billet Products is raising the bar for shortshifter performance and quality. We are extremely excited to release the much anticipated, and what we believe to be, the most spectacular short shifter in the world! Unlike other shifters to suit the GTO which do away with the factory remote ratioed stick design, Billet Products has not only retained the concept for very specific reasons, but have also done the hard yards to take it one step further, creating a true masterpiece of automotive shifter engineering. The first of its kind based on a true remote ratio design, and built to withstand ten rounds from a Russian tank. Nothing comes even remotely close. The shift body is precision CNC machined from lightweight high grade billet aluminum and utilizes high grade steel shafts, providing the perfect combination of materials for strength and performance. You certainly wont find any broken stick here! Furthermore, each shifter is anodized finish, testament to the Billet Products signature of thorough attention to every detail. However, it's not just all show and brute strength, a quick glimpse and you will clearly note the adjustable stick which allows the customer the privilege to adjust the stick height to 3 different positions according to their driving preference. At the standard position (tallest position), the shift movement is reduced by approximately 60%, whilst at the shortest setting, a reduction of around 52% is seen, with stick height adjusted in 20mm (3/4") increments. Unlike the standard shifter, twin spring packs have been incorporated into the design, one per stick, thus self centering and with the shifter position staying central in neutral. Furthermore, the specially designed Billet Pro series positive stop system, and the integrated straight gate shift design from 2nd-3rd are standard aboard this beast! Nowhere else will you find a shifter with such a solid feel of precision, and such thorough engineering and quality of finish. The true trademark of Billet Pro Series shifters. Installation of the entire Billet Pro Series range of shifters is a breeze, with zero modification to the vehicle. With a straight bolt in design, and utilizing the factory gear knob and boots, all necessary fitting hardware is included in each kit making it as simple as removing the factory item and fitting your new Billet Pro Shifter.

Whether its your daily car or a weekend track warrior, a faster shift equates to a faster more fun ride. On the track this can mean the difference between a podium or just a place. At
